```

cur := [Elmt Id("gpBar1")]
Elmt Id("gpBar1") :: click -> cur := [Elmt Id("gpBar1")]
Elmt Id("gpBars") :: click -> cur := [Elmt Id("gpBars")]
Elmt Id("gpRestart") :: click -> cur := [Elmt Id("gpRestart")]
Elmt Id("gpTotal") :: click -> cur := [Elmt Id("quest1"),
                                       Elmt Id("quest2"), Elmt Id("quest3"),
                                       Elmt Id("gpCup"), Elmt Id("gpTotal")]
Button menu -> cur { screen: both, image: source }
  
```

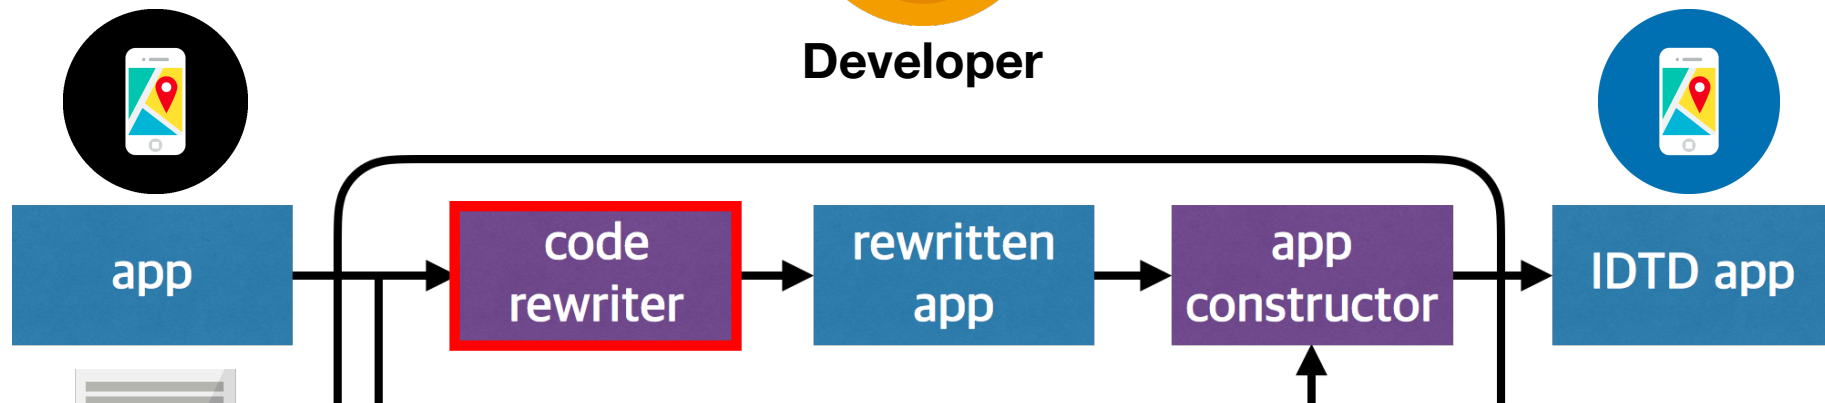

# IDTD Framework

at development time

Developer

Rewrites app to collect originally inaccessible values

- Run-time values of **captured variables**
- **Event functions** attached to DOM objects

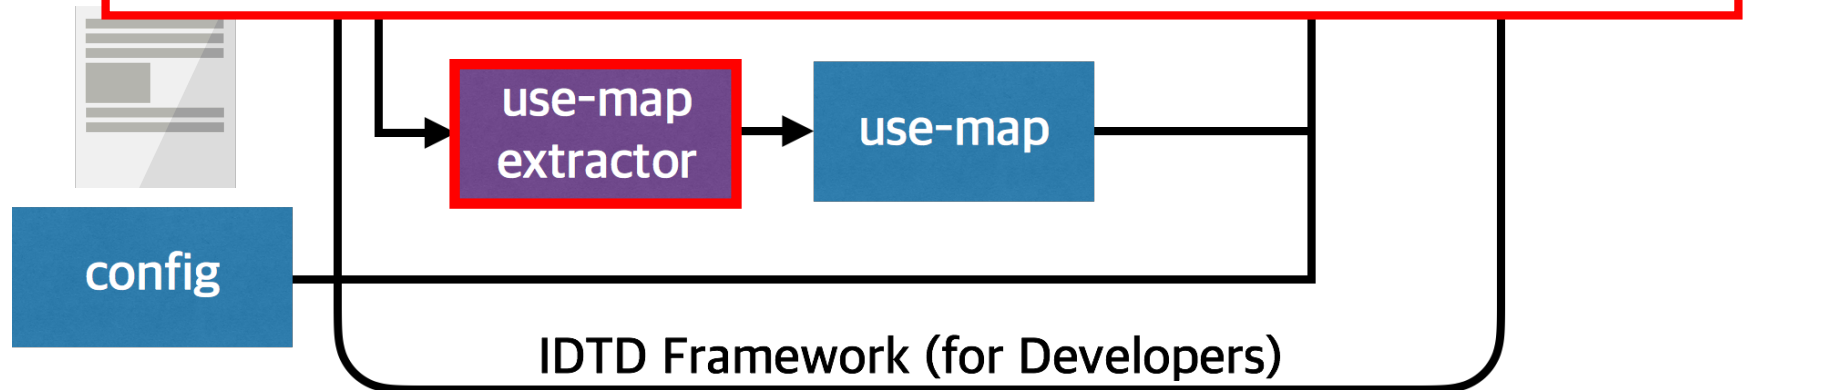

# IDTD Framework

at development time

Collects function body information

- Global variables
- Names and scopes of captured variables
- DOM APIs

## Eventual Consistency

- Guarantees the same status when no more updates
  - Extended from the paper\* written by Marc Shapiro et al.
  - **LWW-Register** and **OR-Map** over **timestamp for JS**

\* Marc Shapiro et al. A comprehensive study of Convergent and Commutative Replicated Data Types.

# Evaluation

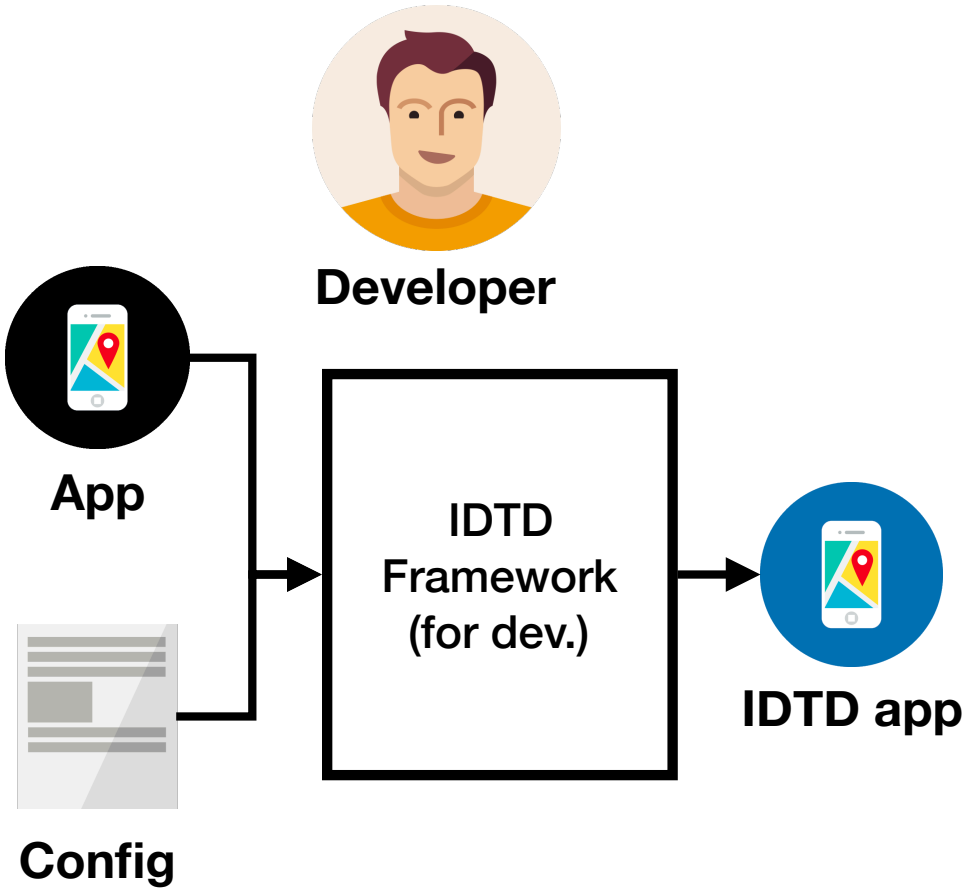

# Practicality of the IDTD Framework

- 5 apps from 20 open-source web apps:
  - Counting Beads
  - Hang On Man
  - Make a Monster
  - Mancala
  - Run Rabbit Run

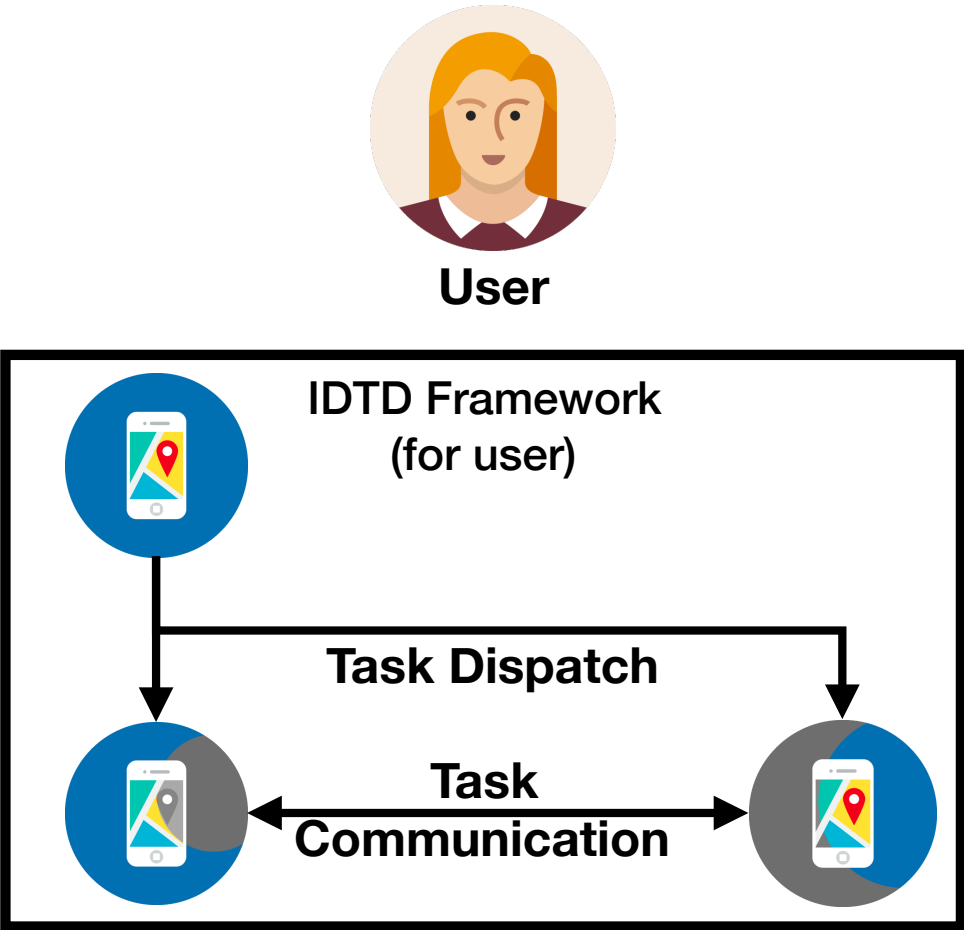

# Conclusion

# Development Time

# Run Time

**IDTD applications have vulnerability issues.**

**1. How to attack IDTD apps?**

**2. How to defend IDTD apps from such attacks?**
