

# Lecture 0 – Course Overview

## COSE215: Theory of Computation

Jihyeok Park

2024 Spring

- **Instructor:** Jihyeok Park (박지혁)
  - **Position:** Assistant Professor in CS, Korea University
  - **Expertise:** Programming Languages, Software Analysis
  - **Office hours:** 14:00–16:00, Tuesdays (appointment by e-mail)
  - **Office:** 609A, Science Library Bldg
  - **Email:** jihyeok\_park@korea.ac.kr
  
- **Class:** COSE215 - 01 (English)
  
- **Lectures:** 13:30–14:45, Mondays and Wednesdays @ 604 Woojung Hall of Informatics (우정정보관 604호)
  
- **Homepage:** <https://plrg.korea.ac.kr/courses/cose215/>
  
- **Teaching Assistant:** Jungyeom Kim (김준겸)
  - **Email:** kimjg1119@korea.ac.kr

Week	Contents
1	Basic Concepts
2	Deterministic Finite Automata (DFA)
3	Nondeterministic Finite Automata (NFA)
4	Regular Expressions and Languages
5	Properties of Regular Languages
6	Context-Free Grammars and Languages
7	Parse Trees and Ambiguity
8	<b>Midterm Exam (Apr. 24 - Wed.)</b>
9	Pushdown Automata
10	Deterministic Pushdown Automata
11	Properties of Context-Free Languages
12	Turing Machines (TMs)
13	Extensions of Turing Machines
14	Undecidability
15	P, NP, and NP-Completeness
16	<b>Final Exam (Jun. 19 - Wed.)</b>

- **5–7 Homework Assignments: 30%**
  - Programming assignments in Scala (submission in **Blackboard**)
  - You can utilize or refer to any other materials (e.g., ChatGPT), but you **MUST** write your **OWN** solution.
  - **Cheating is strictly prohibited. Cheating will get you an F.**
  
- **Midterm exam: 30%**
  - April 24 (Wed.) 13:30 – 14:45 (in class, 75 min.)
  
- **Final exam: 30%**
  - June 19 (Wed.) 13:30 – 14:45 (in class, 75 min.)
  
- **Attendance: 10%**
  - Please use **Blackboard** to attend the class.

- **Self-contained lecture notes.**

<https://plrg.korea.ac.kr/courses/cose215/>

- Reference:

John E. Hopcroft, Rajeev Motwani, Jeffrey D. Ullman. Introduction to automata theory, languages, and computation. Third edition.

- What is the *mathematical model* of computers?

## **Turing Machine!**

Let's learn **Turing Machine**

- Is it possible to solve *every problem* using computers?

**No!**

Let's learn **Undecidability** and **Intractability**

A Turing machine is a specific kind of **automaton**.

- **Part 1: Finite Automata (FA)**

- Regular Expressions (REs)
- Regular Languages (RLs)
- Applications: text search, etc.

- **Part 2: Pushdown Automata (PDA)**

- Context-Free Grammars (CFGs)
- Context-Free Languages (CFLs)
- Applications: programming languages, natural language processing, etc.

- **Part 3: Turing Machines (TMs)**

- Lambda Calculus (LC)
- Recursively Enumerable Languages (REs)
- Undecidability and Intractability

# Roadmap: Towards Turing Machine

	Automata	Grammars	Languages
<b>(Part 3) Turing Machines</b>	(Lecture 23) $\text{ETM} \rightleftharpoons$ (Lecture 21/22) $\text{TM} \rightleftharpoons$ (Lecture 24) $\text{LC}$		(Lecture 21) $\text{REL}$ (Lecture 26) $\text{NP} \stackrel{?}{=} \text{P}$ $\cup$ (Lecture 25) $\text{DL} \supset \text{NP} \supset$
<b>(Part 2) Pushdown Automata</b>	(Lecture 14/15) $\text{PDA}_{\text{FS}} \rightleftharpoons \text{PDA}_{\text{ES}}$ $\cup$ $\text{DPDA}_{\text{FS}} \supset \text{DPDA}_{\text{ES}}$ $\cup$ (Lecture 17) $\not\subseteq$	(Lecture 16) $\text{PDA}_{\text{ES}} \rightleftharpoons \text{CFG}$ (Lecture 11/12) $\text{CFG} \vdots$ <b>Chomsky Normal Form</b> (Lecture 18)	(Lecture 11) $\text{CFL}$ (Lecture 13) <b>Parse Trees &amp; Ambiguity</b> $\vdots$ <b>Closure Properties</b> (Lecture 19) <b>Pumping Lemma</b> (Lecture 20)
<b>(Part 1) Finite Automata</b>	(Lecture 4) $\text{NFA} \rightleftharpoons$ (Lecture 3) $\text{DFA} \rightleftharpoons$ (Lecture 5) $\epsilon\text{-NFA} \rightleftharpoons$ (Lecture 7) $\text{RE}$ (Lecture 6) $\text{RE} \rightarrow \text{DFA}$ Equivalence & Minimization (Lecture 10)		(Lecture 3) $\text{RL}$ $\vdots$ <b>Closure Properties</b> (Lecture 8) <b>Pumping Lemma</b> (Lecture 9)
<b>(Part 0) Basic Concepts</b>	(Lecture 1) <b>Mathematical Preliminaries</b>	(Lecture 2) <b>Scala</b>	

# Introduction of Automata

A Turing machine is a specific kind of **automaton**.

Then, what is an **automaton**?

For example,

## Theorem

*The current state is OFF if and only if the button is pushed even times.*

- Is it possible to prove it?

Let's learn **mathematical background and notation**.

- Is it possible to implement the automaton?

Let's learn **Scala** as an implementation language.

- Mathematical Preliminaries
